

Safety Gate®

CRIBS

What is it? Safety-Gate cribs have a top portion (6-9") that folds down.

How does it work? Push in the finger latch on both the left and right side at the same time to fold the gate down quietly. When in up position, gate is safely locked closed.

Added Safety

- Safety-gate cribs require the **arm span of an adult** to operate, adding safety by preventing other small children from accessing the baby.
- Once in place the safety gate **locks closed**.
- Babies are **less able to climb out**, due to the extra height the gate provides.
- A beveled hinge prevents fingers from getting pinched.

Easier to Reach Your Baby

Up to **9 extra inches** makes it easier to reach into crib to put baby to sleep or change sheets. Most helpful between ages 1-2 when child weighs **20-25 lbs** and mattress is at the **lowest level**.

Benefits everyone, especially shorter parents, C-section moms, and grandparents.

Saves You Money

FREE toddler bed conversion!
All safety gates transform into a toddler bed rail at no extra cost.
(Savings up to \$70)

Longer Time in the Crib

Your baby can stay in the crib an **extra 6-8 months**, due to the deepest mattress level in the industry and the extra height the gate adds.
